## HESTRA PLATTAN - THE SPIRIT OF ERNOL LIVES ON

Our company culture is characterised and embodied by the spirit of Ernol – a culture like this can be found exclusively in a family company.

Ernol's founder Göte Ericsson largely defined the company values that have been consistently expanded and optimised by the owners of successive generations.

But the greatest contribution comes from our employees and their common ambition that is based on our three fundamental corporate values:

- Joy in doing business
- Reliability
- Curiosity

Our reliability is firmly enshrined in our values and defines the handling of our products, services, employees and even all forms of cooperation with our partners.

The key to success is in our core values. We do not question necessary changes, but rather ask ourselves what we can do to generate real added value. Our curiosity, our joy in doing business and our company structure create conditions for progress, efficiency and good business.

Welcome to the family!

/Johanna Bladh  
CEO

## Hestra - our classic

### 30 years and more – more popular than ever before!

The unique pattern of Hestra design click tiles was designed in the 1980s and still today distinguishes our core collection. By choosing the HESTRA product line, you are opting for flooring that is suitable for indoor and outdoor use. Temperature deviations of between -30 and +70 degrees Celsius are guaranteed to defy hestra design click tiles without any deformations occurring, even in larger installations. The click tiles in the HESTRA product line are suitable for countless applications because they are UV-resistant and non-flammable. The guaranteed load-bearing capacity is 110 t/m<sup>2</sup>. Easy to install, complete and maintain.

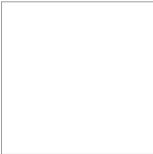

There are many application areas: on the balcony, in the garden, in a swimming pool area, on a damp basement floor or in the garage. The floor tile will fit well both indoor and outdoor and is the best and most decorative solution for any problem floor areas in your home.

Available as accessories: Corner and end strips for a smooth transition to the sub-floor.

# Universa - Multifunctional flooring

## Multifunctional Flooring

With soft tread comfort and our subtle pattern, Hestra design click tiles in the UNIVERSA product line are particularly suitable for all situations exposed to continuous heavy usage. The structure of the floor tile will drain away moist from the surface and enables the sub-floor to breathe and dry. The pattern is quite neutral, so it will never appear dominant neither in rooms nor on a veranda.

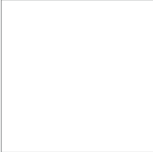

When installed, the UNIVERSA design click tiles look very much like a homogeneous floor covering. It's also very easy to adapt the tiles to the form of your room by cutting along the pattern with a fine saw or knife.

As an accessory, you can add end and corner strips for smooth transition to the sub-floor. You can also add marking or cable strips which are perfectly made for hiding electrical wiring for the perfect use in the public sector.

## Woodlook - the design tile that looks like wood

### A new shape of floor tiles

Hestra design click tiles in the WOODLOOK collection are not trying to replace wooden flooring – but rather we are presenting a wear-free alternative that impresses with its low maintenance requirements, easier installation and soft tread comfort. Let your imagination run wild and create your own favourite pattern.

They can be installed both indoors and outdoors within a temperature range of between -30 and +70 degrees Celsius and are fully UV-resistant.

Available as accessories: Corner and end strips for a smooth transition to the subfloor.

## Maintainance

### Clean flooring - quick and cheap

Never before has it been as easy and cheap to maintain flooring. Hestra design click tiles can be cleaned quickly and efficiently with a vacuum cleaner when the flooring is dry to remove all dust and sand through the spaces in the tiles.

If necessary, wipe the floor installation using water and simple cleaning agents. Avoid products containing thinners as they can affect the colour of Hestra design tiles.

A high-pressure cleaner or water hose can be used if the flooring has been installed on an impermeable surface. If necessary, the floor installation can be removed by taking out each floor tile one-by-one. Regardless of which cleaning method you select, Hestra design click tiles will always look fresh and clean!

It is also possible to clean the floor with a cleaning machine but not too much water should be used in these situations.

# Installation and calculation

## SUB-FLOOR

A hard and flat sub-floor is a prerequisite in order to ensure that the flooring is level. If the flooring is exposed to heavy loads, e.g. for transporting heavy objects, we request that you contact us so that we can give you the right advice: [info@hestra-plattan.com](mailto:info@hestra-plattan.com)

## PREPARATIONS BEFORE THE INSTALLATION

Remove all objects from the installation area and clean it thoroughly, no loose particles should be left on sub-floor.

## INSTRUCTIONS FOR INSTALLING THE FLOORING

Thanks to the click system, our Hestra design click tiles are easy to install. You do not need any tools or experience to connect the tiles. You only need a saw with a fine tooth blade or a cutting tool used for laying wooden flooring to adjust the floor tiles to the size of the installation area.

A. Start the installation in a corner and always work from left to right. Place the floor tiles diagonally against the wall and lay the tiles so that the eyelets are visible on the right-hand side. Leave a 10 to 15 mm gap between the floor tiles and the wall and/or other objects. This gap is absolutely necessary and allows for thermal expansion, particularly when the flooring is exposed to varying temperatures, e.g. in outdoor use.

B. Then press the pins into the eyelets to connect the tiles.

C. Adjust Hestra design click tiles by using a saw with a fine tooth blade, e.g. a jigsaw or cutting tool. While sawing, we recommend that you turn the floor tiles over (underside facing upwards) so that you cut in a straight line. Make sure that the flooring/sub-floor is protected while you are sawing/cutting.

D. Finish off the flooring with end and corner strips if you wish; these are available as accessories. If you want to install Hestra design click tiles in a garage, we recommend that you use screws to firmly fix the first row of floor tiles to the sub-floor. This is necessary so that the floor installation does not move.

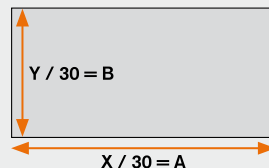

### Calculation for floor tiles 30 x 30 cm

Length  $X \text{ cm} / 30 = A$  tiles  
(always round up)

Width  $Y \text{ cm} / 30 = B$  tiles  
(always round up)

$A \times B = C$  tiles in total

$C / 11 \text{ pcs} = \text{Number of packages}$

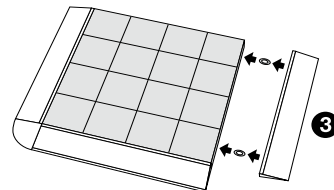

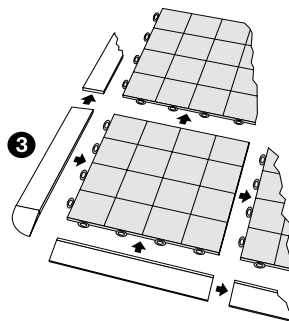

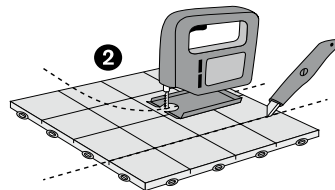

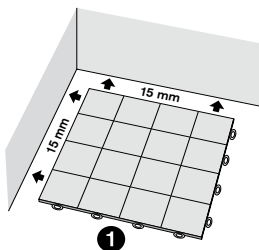

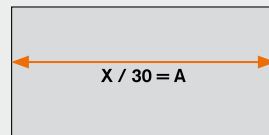

### Calculation of end strip 30 cm

Length  $X \text{ cm} / 30 = A$  pcs  
(always round up)

#### Corner strips

(Calculate 1 for each corner)

These will replace one end strip each
